EDUCATION

Brunel University London

*Bachelor of Science in Computer Science - **First Class Honours** (1st)*

London, UK

Sept 2021 – June 2024

EXPERIENCE

BTMG USA

June 2022 – September 2022

Software Engineer Intern

Remote

- Improved system efficiency by **30%** by developing a REST API using **Express** and **MySQL**, enabling secure and seamless integration across multiple platforms
- Decreased page load time by **45%** on a web-based management tool by optimising **React** components
- Achieved a **25%** reduction in reported bugs by fixing **15** issues in the management tool, including various edge cases, as measured by the issue tracker.
- Achieved a **40%** improvement in pagination speed by reducing load times, resulting in a faster, more responsive user experience, as measured by performance metrics

PROJECTS

Library Book Ordering System | *JavaScript, React, Axios, NextJs, Express, MySQL*

- Collaborated with a **team of 8** to create a book ordering system for easier access to books for teens
- Used an **agile methodology** and **lead a sprint** as scrum master increasing group productivity by **50%**
- Developed both **front-end and back-end** with interfaces using **React** and **Axios**, API endpoints with **Express**, **JWT** for authentication and **MySQL** for the database (designed with **UML** diagrams)

Netflix Clone | *JavaScript, React, TailwindCSS, NextJS*

- Developed and designed a dynamic and responsive Netflix clone
- Leveraged Next.js's server-side rendering (SSR) improving performance and SEO, resulting in **40%** faster load times and better user engagement
- Designed and customized reusable UI components with **TailwindCSS**, ensuring a consistent and visually appealing user interface

Discord Bot for Spotify Integration | *Python, Discord.py, Spotipy*

- Developed a bot that integrates with Spotify API to fetch and display detailed information about artists and songs
- Engaged over **20 users** by designing and implementing intuitive commands for searching artists and songs
- Optimized data retrieval and response times by implementing **asynchronous programming** with **Python asyncio**, improving bot performance
- Conducted extensive testing and debugging to ensure seamless interaction between Discord and Spotify APIs, enhancing bot reliability

AI Word Similarity Checker | *Rust, GloVE*

- Developed an AI word similarity checker using **GloVE textual embeddings** with over **1 million** words
- Developed the search algorithm in **Rust** resulting in a **100%** increase in efficiency (compared to Python)
- Utilised vectors that host **2 billion** tweets, **27 billion** tokens and **1.2 million** unique words (vocab)
- Currently expanding this project by creating a full-stack web application to access the logic as a game

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Rust, Go (Golang), Java, Python, C/C++, C#, Lua, SQL (Postgres, MySQL, SQLite), HTML/CSS (SASS/SCSS), R

Frameworks: React, React Native, Vue, Svelte, NextJS, Node.js, Astro, Flask, Django, Pytorch, Tensorflow, Keras, JUnit, Spring Boot, Ionic, Expo

Developer Tools: Git, Docker compose, Firebase, AWS, Azure, Linux, Relational Databases

Concepts: Software Engineering, Artificial Intelligence, Networks and Operating Systems, Frontend and Backend (Full-stack) Development, CI/CD, Machine Learning, Natural Language Processing, Software lifecycle, Agile Methodology

CERTIFICATES

Google IT Support Professional – Completed this course within a week with an average grade of **90%**
